

# NON Anabolic Replacement!

	LK-XXXPLODE	BODY BUILDER
WHEY PROTEIN	●	
BETA-ALANINE	●	
KRE-ALKALYN	●	
TRIBULIS TERRESTRIS	●	
GABA	●	
DHEA	●	
FERULIC ACID	●	* ●
MSM	●	
GINSENG	●	
MUSHROOM MATRIX	●	

Exclusive product developed by an Equine Pharmacist  
and tested by Trainers and Equine Veterinarians.

**Excellent Alternative  
for the new ruling on Anabolic Steroids.**

# LK-XXXPLODE

- **WHEY PROTEIN**

High Quality, Predigested Protein. The ion-exchanged whey protein in this product is the most bio-available for your body. Essential Amino Acids, including BCAA's The muscles in your body are over 80% protein in dry weight if your goal is an increase of muscle then do it with American Whey. The ion-exchanged whey protein in this product is the most bio-available for your body. This means your body can utilize the supplementation of American Whey better than other types of protein.

- **BETA-ALANINE**

Beta-Alanine is a non-essential amino acid and is the only naturally occurring beta-amino acid. Beta-Alanine's performance benefits are not direct but realized through its ability to boost the synthesis of carnosine. Researchers have shown that when supplementing with Beta-Alanine, we can increase our carnosine concentration up to 80%. This is a tremendous increase in an already powerful intracellular buffer. It is this large increase in buffering capacity within our muscles that is largely responsible for the strength, lean body mass, power and muscular endurance gains that researchers are seeing from Beta-Alanine studies.

- **KRE-ALKALYN**

Kre-Alkalyln® is Creatine which is 100% stable and will not break down into Creatinine. This allows the Creatine to be absorbed more efficiently. Kre-Alkalyln®'s buffering effect assists in sparing the body's natural bicarbonate stores, prolonging muscular performance and delaying the onset of fatigue.

- **TRIBULIS TERRESTRIS**

Tribulus Terrestris contains steroidal saponins, alkaloids, and flavanoids, and its protodioscins content is believed to be responsible for its effects on hormone, and body composition. It boosts energy levels, to promote healthy hormone function, to enhance muscle tone and to support athletic training.

- **GABA**

Gamma-Aminobutyric Acid (GABA) is a non-essential amino acid formed from glutamic acid with the help of vitamin B6. GABA is found in almost every region of brain, GABA is an important amino acid neurotransmitter in the brain. It regulates brain nerve cell functions and has been referred to as the brain's natural calming agent.

- **DHEA**

The body to produce its own Growth Hormone and Testosterone in a natural way, so they will not be overproduced. DHEA is safe as well as effective. Natural production of hormones begins trailing off at an early age, causing a gradual loss of running speed and a tendency to accumulate fat instead of muscle. The breakthrough formula optimizes the horse's quality muscle and running speed.

- **FERULIC ACID**

Part of the Gamm Oryzano molecule. The effects are increased strength, improved recovery, reduced muscle soreness, reduced sensation of fatigue, and decrease catabolic effect of cortisol. Ferulic is 30x more bioavailable then Gamma Oryzanol.

- **MSM**

The benefits of MSM have been demonstrated in numerous field tests and studies. Known for its natural anti-inflammatory properties MSM is a bio-available sulfur compound. Sulfur is important in skin, hair, connective tissue, hormones and immunoglobulins.

- **GINSENG**

Help deal with the mental and physical stress of intense training and competition– for equine mental and physical stress of competition and training. A powerful herb.

- **MUSHROOM MATRIX**

Provides thousands of natural enzymes and proteins in optimum evolutionary. Ratio for uptake and utilization. With high levels of anti-oxidants beta glucans (for strong immune building)
